Harlan P. Kelsey, Inc., with its three hundred acres of the finest nursery stock, its modern buildings and equipment and its Landscape Department, is an institution that supplies the finest of ornamental nursery stock and is equipped to give the best in service.

The aim of Harlan P. Kelsey, Inc., is to supply only the best and at a cost that is commensurate with value. This is made possible through nearly half a century of horticultural and business experience, and through having a competent personnel and adequate equipment.

Many of America's choicest ornamentals have been introduced to cultivation by Harlan P. Kelsey, including Carolina Hemlock, Pinkshell Azalea, Korean Chrysanthemum, Galax, Grays Lily, Carolina Rhododendron, White Carolina Rhododendron, Kelsey Catawba Rhododendrons, Kelsey Locust, Oconee-bells and Featherfleece.

Kelsey-Highlands Nursery specializes in Hardy Native American Plants and Specimen Evergreens and in the newer and rarer plants. All stock is individually grown, with plenty of light, air and nourishment, producing sturdy specimens having excellent root systems. Our ornamental material includes the best Evergreens, Broadleaf Evergreens, Deciduous Trees, Shrubs and Flowering Plants for the gardens of today.

LANDSCAPE ARCHITECTS

The growing of finer plants is a business demanding a specialized knowledge. The proper planning and designing of home sites is an entirely distinct field and requires a different type of training and point of view.

HARLAN P. KELSEY, Inc., has a staff of men trained and experienced in Landscape Architecture in order to insure a successful home grounds development which will combine beauty and convenience with economy of construction and maintenance.

They are competent to solve each individual problem—be it the planting of a corner of a small home or the designing of a great park, estate or other large scale project. You will find these men glad to help you.

INSTRUCTIONS FOR PLACING ORDERS

SHIPPING SEASON begins in Spring, when frost leaves the ground, usually March 15 to June 1. August planting of Specimen Evergreens—Rhododendrons, Kalmias, Leucothoes, Conifers and many Bulbs and Herbaceous Plants—has proved most successful, general stock going out again from September to December.

Shipping Instructions should be given, otherwise we use our best judgment but assume no risk. All shipments travel at purchaser's risk, and carriers must be held liable for any damage in transit. All stock becomes the property of the purchaser on delivery to transportation company or carrier.

PRICES are made to fit the quality of the stock shipped. Discriminating buyers now realize that the greatest value of nursery stock is underground. Frequent transplanting and handling specimens with adequate burlapped balls, means success and quick results. It costs more, but it is the fixed policy of Harlan P. Kelsey, Inc., and "cheap" stock will not be handled or sent out. The best is always the cheapest.

SPECIAL SELECTION. Stock specially selected at Nursery or ordered by mail will be charged at advance prices to fit the value of the stock selected. The prices in this catalog cover the average good grades as they run in the nursery row.

TRUCK DELIVERY. Where the size of order warrants, there are distinct advantages in auto-truck delivery for distances up to 50 miles, and we make large deliveries up to 250 miles. Stock arrives quickly and just when wanted, and is delivered fresh on the grounds, saving local trucking and unpacking. Charges are made according to size of truck and distance traveled.

PACKING CHARGES. At prices printed in this catalog, boxing, balling and burlapping is free, except where small sizes of deciduous stock is balled and burlapped by special request. In such cases a charge to cover cost is made as follows

BURLAPPING CHARGES—	Each
Small sizes	\$0.15
2 to 3 ft. clumps and trees20
3 to 4 ft. clumps and trees25
4 to 6 ft. clumps and trees35
6 to 8 ft. clumps and trees50
Larger sizes at corresponding rates.	

On orders to the Trade, packing cost and B. & B. is always charged.

Larger sizes are billed in proportion. Where large evergreens are shipped on "platforms," a suitable charge will be made to cover cost.

QUARANTINE. The Federal Horticultural Board has proclaimed a practically complete embargo on all Foreign Trees and Shrubs and most Herbaceous Plants. Our Native Trees and Plants are hardier, freer from diseases, and more “fitting” in our landscapes. Still the best exotics can and now will be grown in America for Americans.

All stock leaving the Nursery bears certificate of inspection, showing it to be absolutely free from injurious pests or disease.

PLANT INSURANCE. No guarantee—expressed or implied—is made that stock will grow, whether planted by us or not. As we have no control over after-treatment or weather conditions, the purchaser must assume all risks after stock leaves our Nursery in good condition. On request, we insure stock for a specified period at a rate covering estimated hazard.

TERMS. Cash or satisfactory reference from unknown customers. All accounts are due the first of each month, unless by special arrangement. Five at 10 rate, 25 at 100 rate, 250 at 1,000 rate. ~~5~~ 10 per cent discount may be taken only WHEN CASH ACCOMPANIES THE ORDER. When not taken, extra plants will be sent to cover such discount.

Claims for errors must be made on receipt of goods. If there is any mistake or fault on our part it will be gladly rectified.

“Standardized Plant Names” is authority for all names used in this catalog

EVERGREENS

The charm of evergreens is in their variety of forms and their dependability in giving beauty of color all year round.

Properly chosen for each particular location, evergreens have a place of importance in every planting. Their judicious use, along with the broadleaf evergreens and deciduous trees and shrubs, makes for attractiveness at all times. In Winter the otherwise harsh and bleak landscape is enlivened and given a feeling of warmth by the soft beauty and gentle lines of evergreens properly placed.

Care must be used in the choice, location and spacing of evergreens, for many, like the Hemlocks and the Firs will reach an eventual height of thirty to one hundred feet, while the Yews, some of the Arborvitae and many of the Junipers are dwarf or spreading in habit.

More plantings are spoiled through crowding than through planting too sparsely—remember this, and allow plenty of room for future growth.

We are glad to assist you in your selection of evergreens—if the descriptions, which are necessarily quite abbreviated, do not give you clear enough pictures of the plants, write to us and we will gladly tell you more about them.

NOTE.—The heights given immediately after the names are approximate heights reached by the trees and shrubs under most favorable conditions, first under cultivation, and then as observed in their native habitat, particularly the larger varieties.

caroliniana, CAROLINA HEMLOCK. 30-70 ft.

Introduced to cultivation by Harlan P. Kelsey. "The finest Hemlock of them all." Unique in habit, with dark, dense, tufted foliage on sweeping pendulous branches. It is hardier and more adapted to trying city atmospheres than the Canada Hemlock and seems to thrive in southern latitudes where the latter becomes thin, yellow and unsightly.

BROADLEAF EVERGREENS

ANDROMEDAS, KALMIAS, LEUCOTHOE,
RHODODENDRONS, ETC.

Probably no ornamentals have become more deservedly popular than the Broadleaf Evergreens. Their beauty of flower and foliage merits your consideration and promises added possibilities in the landscaping of your grounds.

All of the species that we list—and most of them are natives of the United States—are perfectly hardy as far north as Quebec, if given proper soil conditions and exposure or location.

Mass plantings of Rhododendrons, Mountainlaurel and Andromedas, with “filler” or “edging” plants, such as Leucothoe, Heather, Rose Daphne and Sandmyrtle, are greatly desired and probably show these Broadleaf Evergreens at their best. Such ground covers as Bearberry, Canby Pachistima and Japanese Pachysandra carpet the shady spaces luxuriantly.

Our long experience in growing and planting Broadleaf Evergreens is at the service of customers at all times.

ARCTOSTAPHYLOS Each 10 100

DECIDUOUS TREES AND SHRUBS

The deciduous trees and shrubs listed are varieties that have proved of merit for planting as far north as northern New England and many are hardy in southern Canada.

The choice of varieties depends on the location and the type of planting. We offer many trees that are unexcelled for lawn, park and street planting, while the flowering shrubs, relatively inexpensive, are useful in mass plantings, shrub borders, and in foundation plantings with the evergreens and broadleaf evergreens. There are some flowering shrubs to add color to each season and those that fruit attract great numbers of birds.

NOTE.—The heights given immediately after the names are approximate heights reached by the trees and shrubs under most favorable conditions, first under cultivation, and then as observed in their native habitat. Color of flowers and time of bloom are given, unless the flowers are inconspicuous or lacking.

AZALEAS

We list only the native and most hardy exotic varieties. These acid-soil loving plants mass well with the broadleaf evergreens and are distinct and beautiful additions to any planting. Though not evergreen they are closely related to the rhododendrons and require similar soil conditions and care.

AZALEA, Azalea.

arborescens, SWEET AZALEA. 5-15 ft. White and pink. June-July. Delightfully spicy, fragrant white flowers with pink stamens appear in profusion, lasting for weeks. The foliage colors striking shades of red in late Autumn.

MALUS, THE FLOWERING CRAB

The Flowering Crabs have few rivals among gorgeous Spring flowering trees and shrubs. At the Arnold Arboretum one of the important events of the year is the blooming of the Crabs, followed by the showy fruit.

They are of easy culture, and whether planted singly or in masses, give remarkable and quick results. Not only are the Flowering Crabs beautiful on the lawn, but they are used to the greatest advantage on a large scale in woodland and other mass plantings, as are Dogwoods and Hawthorns. No group of plants has greater value for enlivening open forest parks and the country roadside.

As soon as the ground can be worked in Spring is an ideal time for planting, and again in Fall after foliage is well ripened. Give rich soil and mulch heavily. Use all the water the soil will take in planting.
